

OTHER MEDICAL SERVICES

FIBROSCAN

This is a non-invasive test to measure the degree of scarring and fat content within your liver.

INFUSIONS

Iron Infusions, Zoledronate Infusions, Infliximab Infusions.

VENESECTION

A therapeutic removal to reduce the volume of blood, by removing red blood cells.

AMBULATORY BLOOD PRESSURE MONITORING (ABPM)

Analysis of regular blood recordings over a 24 hour period to assist your doctor with medical therapy.

BREATH TESTING

Analysis of hydrogen breath samples to diagnose small bowel bacterial overgrowth, malabsorption and food intolerances followed by a tailored Dietitian consultation.

SALINE SUPPRESSION TEST (SST)

Used to assess the levels of aldosterone and renin in your blood. These are two hormones that are involved in the regulation of blood pressure.

BOWEL SCREENING PACKAGE

Maintaining a healthy bowel for long term wellbeing.

Bowel cancer is the second highest cause of cancer death in New Zealand. It is preventable with timely intervention. Annual bowel screening is recommended for both men and women aged 50 and over, even if you have no symptoms.

We offer a comprehensive all-inclusive package to screen your bowel for bowel cancer and treat any polyps found during the procedure.

The package includes a full Colonoscopy and a follow up appointment with your Gastroenterologist.

No referral is necessary.
